

I hold a B.Sc in Biology (UNAM, Mexico) and an M.Sc in Forestry (UBC, Canada). I am doing my PhD at University Laval working on simulating carbon dynamics in black spruce forests under different fire regimes

I am currently doing an internship at ECO-MCS lab developing the last chapter of my PhD research project, with main objective to determine the effect of future fire regimes on carbon storage for the boreal forest of Canada.

More information of my academic profile and research interest can be found here:
